

Australia's Kordz presents a pair of HDMI cable series at ISE 2018-- the flexible and versatile ONE range and the PRS AOC, an "ultra-reliable" HDMI cable that is both secure and simple to install.

Available in either standard with ethernet (in 5 and 10m lengths, supports 1080p) and high speed with ethernet (in 0.5, 1, 2 and 3m lengths, supports 2160p 4K UHD content), ONE cables feature infrared soldered pin transitions for benchmark inter-terminal uniformity. The cable consists of an economy booth shell assembly with a folded steel HDMI connector, and is suited for applications such as AV racks, corporate spaces, education environments and residential installs.

Meanwhile the PRS AOC series delivers HDR, 3D, 4K UHD and High Frame rate signals in a cable featuring a slim profile with an anti-vibration connector shell just 18mm wide. The connector has a 1kg grip, and Kevlar-inforced internals allow superior flexibility and pull strength during installation.

Lengths range from 10m up to 30m (longer lengths to follow), all with 18Gbps maximum bandwidth without need for external power.
