Altinex launches the TE460-137-- an HDMI signal generator and analyser designed for installers and consultants wanting to test and verify all aspects of an HDMI signal path.

The TE460-137 is a portable device, and can test and verify compliance with HDMI specification, regardless of what is used between inputs and outputs. It has both HDMI input and output with 18Gbps (600MHz) 4K UHD support and with 4K to 1080p scaling to support and comply with HDMI 2.0a and HDCP 1.4/2.2 standards.

An Analyser mode is compliant with the CEA standard and HDR static extensions CEA-861-F and CEA-861.3 for EDID analysis. The integrated OLED display allows one to see the current state and results of signal analysis. In stock configuration, the TE460-137 comes with a rechargeable lithium-ion battery, USB charging cable with power supply, HDMI cable for testing purposes and hard plastic travel case.

The TE460-137 is available now.
