

Flush Mounts for Josh.ai From Wall-Smart

Written by Marco Attard
23. 07. 2019

Josh.ai joins forces with flush mount solution maker Wall-Smart to create mounting systems for new construction and retrofit applications to help customers blend the Josh Micro device into home environments.

Catering to the interior décor of the home, customers can mount the Josh Micro flush to the wall using the result of the partnership. Custom-built around the spherical structure of the Josh Micro, the mount features audio grilles allowing for maximal sound path while minimising visual impact when positioned in the wall.

The new construction mount includes a bezel users can paint with the wall finish to make it even more subtle. For an easier installation without need for construction, the retrofit mounts give a nearly-flush option. Similar to other Wall-Smart offerings, custom audio grille details and colour finishes are available upon request for every mount variation.

"We're excited to partner with Wall-Smart as a fellow design-focused innovator in our industry," Josh.ai says. "The look and feel of the Josh.ai experience is extremely important as we align ourselves with the design, architecture and builder communities. Our relationship with Wall-Smart is another step towards blending technology into a truly connected home."
