Metra Home Theatre Group (MHTG) debuts the Helios DisplayPort cables at CES 2020-- a range of cables with support for video resolutions reaching up to 8K available in 90cm (AS-DP-3003), 1.8m (AS-DP-3006) and 2.7m (AS-DP-3009) lengths.

The Helios cables work with resolutions ranging from HD (1920×1080@60Hz, 120Hz, 144Hz, 165Hz) to 8K (7680×4320 @ 60Hz, 10-bit color, RGB 4:4:4, HDR, DSC), and support the highest quality audio pass-through for digital 7.1, 5.1 or 2 channels. They are also designed to facilitate multi-monitor configuration with a Display Port 1.4 cable, and are backwards compatible with DisplayPort 1.2 cables.

The company adds the cables are ideal for the connection of compatible PC graphics cards to high frequency gaming monitors, and offer an ultra-fast response time for gamers. To further enhance the customer experience, the cables feature a lifetime warranty and are sold in elegant retail packaging.
