Platinum Tools announces the Stub-End Coax Cable Stripper RG59/6 (p/n 15046C), a means for installers to find the stub end of a coax cable in retro coaxial installs with restricted terminating space.

“A common scenario in retro coaxial installs is finding the stub end of a coax cable protruding on the inside of a wall outlet or MDU box,” the company says. “Using a standard coax cable stripper is difficult due to the restricted terminating space. We have the solution-- use the Stub-End Coax Cable Stripper.”

The Stub-End Coax Cable Stripper rotates like a screwdriver in either direction as it strips in

restricted terminating space. A built-in braid comb combines braid back over jacket, while the replaceable blade cassette requires no adjustment. It strips both RG59 and RG6 coax cables, with braid strip dimension of 6.3mm.

The Stub-End Coax Cable Stripper is available now.
