Platinum Tools announces the ezEX RJ45 Starter Kit, a package containing an EXO Crimp Frame with EXO-EX Die, ezEX38 connectors (x 25), ezEX44 connectors (x 50), ezEX48 connectors (x 25) and ezEX strain reliefs in assorted colours (x 20).

“In today’s networks, twisted pair cables are demanding more speed and bandwidth, often carrying power in PoE applications,” the company says. “To help meet these requirements and the changes in cable they have necessitated, customers are converting to the ezEX line of connectors. Platinum Tools’ new ezEX RJ45 Starter Kit provides an easy way to make the switch and meet these higher performance demands.”

The patented EXO Crimp Frame with the interchangeable EXO-EX Die is designed to terminate the patented, passthrough ezEX-RJ45 connectors. The connectors cover a wide range of insulation diameters (conductors) and cable jacket diameters, making it easy to select the right connector for the cable in question. All three sizes, ezEX38, ezEX44 and ezEX48, shielded or non-shielded, are rated for 10 Gig and PoE, and can be used for Cat6A, Cat6 and Cat5e, covering a full insulation diameter range of 0.83-1.22mm.

The ezEX RJ45 starter kit is available now.
