Leon announces an addition to the Tonecase line of technology concealment products-- the TcFIT-U, a universal solution for mounting any Sonos soundbar to a TV, including the recently released [Sonos Arc](#).

The TcFIT-U system includes a signature Leon custom grille built to match the width of the TV, blending the soundbar with the display for a streamlined look. It comes in three models offering adjustable depth to accommodate all Sonos soundbars, namely the Beam, Playbar and Arc, and mounts directly to any TV up to 98-inch in size via undermount brackets.

The entire unit is covered with a custom-width fabric grille. The standard fabric colour is black, with the option to upgrade to a collection of designer grille fabrics. Installers can integrate the TcFIT-U into the Leon Edge Media Frame, a product encasing the TV and soundbar with a contemporary frame in a selection of wood and metallic finishes. In addition to Sonos soundbars, the TcFIT-U can house a variety of soundbars from other manufacturers.

The TcFIT-U should ship from July 2020.
