

Multiple Signals in a Single Connector

Written by Marco Attard

BTX Technologies unveils its ProBlox all-in-one connector system-- incorporating multiple data, HD, audio and control signals in a single connector.

The ProBlox includes x2 Cat5e connectors with x16 HD video and x18 audio and control field-terminatable contacts.

Thus the system can be configured in numerous combinations requiring HD (through 75-ohm video contacts), video, VGA, analog/digital audio, control signals or DC Power feeding a single location.

It also reduces clutter and provides a clean, professional look by reducing individual connectors.

BTX says the system makes set-ups simple enough for a non-technical user to handle.
