Magenta Research announces an addition to its MultiView family-- one delivering 1920 x 1200 resolution single link DVI-D video over 1200' of standard UTP cable.

The model outputs DVI or RGBHV video, alongside serial and audio signals.

Integrators can also daisy-chain MultiView DVI receivers for additional install flexibility.

The models are compatible with Magenta's Mondo Matrix III scalable UTP switch-- resulting in Mondo Matrix installations supporting both digital and audio signals within the same switch, with configurations ranging from 16 x 16 to 256 x 512.
