logear show the industry's first "portable" USB to HD Adapter, the GUC2025H, designed to connect additional HD displays to a desktop or laptop computer using a USB 2.0 cable. With an USB-to-HDMI Adapter in place, laptop users will be able to have up to three displays showing content; the laptop screen, a second display via the built-in VGA port and a third from the USB port courtesy of logear's new adapter.

The GUC2025H complements convergence since it provides a hard-wired streaming solution to get any standard or HD content from a PC to the TV with only a single HDMI cable connection. YouTube, Hulu and other computer content can be streamed to the TV interference-free with ease.
