MODEL: AT-DVI4-100SR

Atlona launches its AT-DVI4-100SR DVI extender kit, saying it extends uncompressed 48-bit video to up to 350' (at up to 4Kx2K resolutions) over single Cat 5/6/7 cable.

It carries HDBaseT technology and offers bi-directional RS-232, IR and Ethernet pass-through-- simplifying installations for integrators.

Ethernet pass-through eliminates the need for an additional dedicated cable for displays with on-board applications (such as Pandora and Netflix), while bi-directional IR and RS-232 support are ideal for use with control and autiomation solutions.

It is also fully HDCP and EDID compliant.
