CEDIA names the Atlona KIT-PROHD3 custom installation testing kit as one of the Best New Product winners at the Manufacturers' Excellence Awards during CEDIA Expo 2011.

The company says the kit diagnoses 99% of all A/V digital connectivity issues (saving installers time and overhead) through its combination of portable HDMI signal generator, 7" HDMI monitor, EDID emulator and 5-hour monitor battery inside a high-quality Pelican case.

The AT-HD800 HDMI signal generator allows resolution, video timing, EDID and colour space issue diagnosis on any DVI or HDMI video system, with x13 test patterns, HDMI output and HDMI pass-through.

The AT-DIS7-PROHD testing monitor tests 2D and 3D sources, and recognises HDMI, DVI, VGI and component video sources with resolutions of up to 1920x1200.

Meanwhile the AT-HDSync helps fix EDID, hot plug or sync issues, as it stores EDID setting information in non-volatile memory and supports HDCP handshaking.

It also generates a missing hot plug, staying in line to maintain the hot plug at all time.
