

Adapting MHL to HDMI on the Move

Written by Marco Attard

DVDO launches the DVDO Mobile HD travel kit-- a portable MHL-to-HDMI adapter and multi-charger solution.

Supporting the MHL standard, it charges MHL-enabled smartphones and tablets while connecting devices to HD displays via HDMI.

It comes with integrated 20" USB-A connector, 8" micro-USB connector and 36" HDMI connector-- all with recoiling wrap-and-hide cable management. An integrated USB-to-PC connector and USB-to-AC charger provide multiple charging options.

USB connectivity also allows data transfer between smartphones, tablets and PC for both content management and device software updates.

If the connected HD display supports the appropriate HDMI CEC commands, the DVDO Mobile allows hands-free control via standard remotes through DVDO software.
