Sanus adds the Super Slim HDMI cable range to the Elements AV accessory series-- the 3.3' ELM4303, the 3.3' ELM4306 and the 8.2' ELM4308 models.

All cables feature a wire gauge Sanus says is 45% thinner than traditional HDMI cables (allowing for easy and kink-free bending in tight spaces) and shorter connector heads, which the company says make them ideal for installation behind mounted flat-panel TVs.

The cables carry 1080p and 3D video signals, with an integrated Ethernet cable providing internet connectivity.
