SIIG and DisplayLink join forces with the SIIG USB 3.0 to HDMI with Audio adapter, a compact hot-pluggable accessory adding an HDMI port to any USB-enabled PC.

It carries a DisplayLink DL-3500 USB virtual graphics chip and handles standard and widescreen (4:3, 16:9 and 16:10) video with up to 2048 x 1152 resolutions. Being USB bus powered, it needs no additional power adapter.

In addition users can connect x6 adapters simultaneously, with DisplayLink software providing easy configuration.
